

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/29/2011 has been entered.

Drawings

2. The drawings were received on 06/10/2008. These drawings are acknowledged / accepted.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Theodosios Kountotsis (Reg. No. 54,238) on 01/13/2012.

The application has been amended as follows:

In the Claims:

1. (Currently Amended) A method of operating a packet data multicast communication system comprising a first station and a plurality of second stations, the first and second

Art Unit: 2617

stations having transceiving equipment for communication between the first and second stations, the method comprising:

the first station transmitting a data packet and at least one of the plurality of the second stations receiving the data packet, wherein the at least one of the plurality of the second stations measuring the quality of reception of the received data packet, and

determining at the plurality of second stations into which one of at least three predetermined quality ranges the measured quality falls,

formulating response types based on the determined quality range;

evaluating at the first station a relation between the response types and forming a correspondence to at least two non-contiguous ones of the quality ranges based on the relation; and

adopting at the first station a respective subsequent transmitter behaviour based on the correspondence;

~~wherein the first station adopts a respective subsequent transmitter behaviour in response to each of the at least three predetermined quality ranges,~~

wherein the subsequent transmitter behaviour corresponding to at least two non-contiguous ones of the quality ranges is identical,

wherein the subsequent transmitter behaviour includes adjusting at least one transmitter parameter of the first station such that the at least one transmitter parameter corresponding to the at least two non-contiguous ones of the quality ranges is identical; and

wherein the data packets falling into one quality range ~~directly~~ influence

Art Unit: 2617

concurrent or subsequent retransmission decisions regarding the data packets falling into another quality range.

15. (Currently Amended) A packet data multicast communication system

Comprising:

a first station and a plurality of second stations, the first and second stations having transceiving equipment for communication between the first and second stations, the first station having means for transmitting data packet, and the second stations having means for receiving the data packet,

wherein the second stations ~~having~~ include:

means for measuring the quality of reception,

means for determining, at the plurality of second stations, into which one of at least three predetermined quality ranges the measured quality falls, response types based on the determined quality range, and a relation between the response types for forming a correspondence to at least two non-contiguous ones of the quality ranges based on the relation; and ~~and in that the first station has means for adopting a respective subsequent transmitter behaviour in response to each of the at least three predetermined quality ranges, the subsequent transmitter behaviour corresponding to at least two non-nontiguous ones of the quality ranges being identical, and~~

means for adopting at the first station a respective subsequent transmitter behaviour based on the correspondence;

wherein the subsequent transmitter behaviour corresponding to at least two noncontiguous ones of the quality ranges is identical;

wherein the subsequent transmitter behaviour includes adjusting at least one transmitter parameter of the first station such that the at least one transmitter parameter corresponding to the at least two non-contiguous ones of the quality ranges is identical, and

wherein the data packets falling into one quality range ~~directly~~ influence concurrent or subsequent retransmission decisions regarding the data packets falling into another quality range.

19. (Currently Amended) A second station for use in a packet data multicast communication system, said communication system comprising a first station and a plurality of second stations,

~~a first station and a plurality of second stations,~~ the second station having: transceiving equipment for communication between the first and second stations and means for receiving a data packet transmitted by the first station,

wherein the second station ~~having~~ further includes:

means for measuring the quality of reception,

means for determining, at the plurality of second stations, into which one of at least three predetermined quality ranges the measured quality falls, response types based on the determined quality range, and a relation between the response types for

Art Unit: 2617

forming a correspondence to at least two non-contiguous ones of the quality ranges based on the relation; and ~~and by means for determining into which one of at least three predetermined quality ranges the measured quality falls, wherein each of the at least three predetermined quality ranges station represents a respective subsequent transmitter behaviour of the first station and wherein the subsequent transmitter behaviour corresponding to at least two non-contiguous ones of the quality ranges is identical, and~~

means for adopting at the first station a respective subsequent transmitter behaviour based on the correspondence;

wherein the subsequent transmitter behaviour corresponding to at least two noncontiguous ones of the quality ranges is identical;

wherein the subsequent transmitter behaviour includes adjusting at least one transmitter parameter of the first station such that the at least one transmitter parameter corresponding to the at least two non-contiguous ones of the quality ranges is identical, and

wherein the data packets falling into one quality range ~~directly~~ influence concurrent or subsequent retransmission decisions regarding the data packets falling into another quality range.

Allowable Subject Matter

4. In view of amended claims and further search, Claims 1-20 are allowed.

Art Unit: 2617

5. The following is an examiner's statement of reasons for allowance: Claims 1-20 are allowed for the reasons as set forth in applicant's response filed on 12/05/2011.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BABAR SARWAR whose telephone number is (571)270-5584. The examiner can normally be reached on MONDAY TO FRIDAY 08:00 AM -04:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, NICK CORSARO can be reached on (571)272-7876. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
